EXPERIENCE

JPMorgan Chase & CO.

Mumbai, India

Software Engineer I — Python, React

Aug. 2023 – Present

- **Documented systems, legacy workflows, and alerting/monitoring configurations** to support faster onboarding and reduce knowledge gaps within the team.
- Identified and fixed a bug in the internal core framework **reducing response drops from 3% to 0%**
- **Led on-call investigation** into critical CPU usage spike; implemented fix that cut resource utilization by **75%**
- Saved **8 hours/month** for manual operations by automating configuration workflows.
- Reduced Mean Time To Recovery by **25 minutes** by integrating distributed tracing into microservices.
- Supported and mentored interns by helping them onboard, navigate internal frameworks, and contribute to production-ready code.

Software Engineer Summer Intern — Python, React

June 2022 – July 2022

- Improved data issue detection speed by **2x** with a custom cache checker tool.
- Migrated internal legacy tools from ASP to React, improving maintainability and development efficiency.

COMMUNITY EXPERIENCE

TCET Open Source (College Open Source Community)

Mumbai, India

Backend Lead — NodeJs — 40 Star on Github

Feb. 2023 – Jul. 2023

- **Led a team of 13 developers** in planning and delivering a full-scale ERP system for the college, streamlining academic and administrative processes for 5,000+ users.
- Designed the system architecture, developed core backend services, implemented database models, and integrated frontend workflows to ensure scalability and maintainability.

PROJECTS

OpenRacer  | Python, Unity, Fast API, React, Web Sockets, SQLite

May 2024

- Built a 3D simulation platform using Unity and Python for training and evaluating autonomous driving models.
- Enabled custom track as input, and real-time agent control via Web Sockets.
- Integrated a Fast API server backend with React-based front-end for training data visualization.

NASA Ontology  | Python, TensorFlow

Oct. 2021

- Developed a semantic and keyword search engine over 10k NASA datasets using embedding, KNN, and BM25
- Created metadata-based network visualization to show relationships between datasets.
- Classified datasets into 11 categories and 75 subcategories using ML techniques.
- Reduced loading time from 30s to 3s with pagination and optimized queries.

TECHNICAL SKILLS

Languages: Python, JavaScript, C++, SQL, Go

Tools: Docker, Grafana, Git, GitHub, Unity

Technologies/Frameworks: Flask, React, NodeJS, Express, TensorFlow, PyTorch

Concepts: System Design, Site Reliability Engineering, Cloud basics, Game Dev

EDUCATION

Thakur College of Engineering and Technology

2019 – 2023

Bachelor of Engineering, Computer Engineering ; CGPA - 9.51

Mumbai, India

ACHIEVEMENTS

- Q1 2025 Catalyst Award from JPMorgan & Chase Co.
- GDSC Lead, TCET: Conducted 10+ workshops on Docker, Cloud, and AI/ML.
- 2nd Place – HackNITR Hackathon
- Achieved rank 1272 in Google HashCode
- Achieved rank in top 150 in Reply Coding Challenge

CERTIFICATIONS

- AWS Certified Cloud Practitioner
